

2022 national energy storage installed capacity

How many GW of battery storage is there in 2022?

Total installed grid-scale battery storage capacity stood at close to 28GW at the end of 2022, most of which was added over the course of the previous 6 years. Compared with 2021, installations rose by more than 75% in 2022, as around 11GW of storage capacity was added.

Will new energy storage be more expensive in 2025?

The NDRC said new energy storage that uses electrochemical means is expected to see further technological advances, with its system cost to be further lowered by more than 30 percent in 2025 compared to the level at the end of 2020.

What is India's national electricity plan 2022?

In September 2022, India released its draft National Electricity Plan, setting out ambitious targets for the development of battery energy storage, with an estimated capacity of between 51 to 84 GW installed by 2031-32.

How much money is invested in battery energy storage in 2022?

Global investment in battery energy storage exceeded USD20 billion in 2022, predominantly in grid-scale deployment, which represented more than 65% of total spending in 2022.

Will grid-scale battery storage grow in 2022?

Grid-scale battery storage in particular needs to grow significantly. In the Net Zero Scenario, installed grid-scale battery storage capacity expands 35-fold between 2022 and 2030 to nearly 970 GW. Around 170GW of capacity is added in 2030 alone, up from 11GW in 2022.

Is India ready for battery energy storage in 2022?

The Inflation Reduction Act, passed in August 2022, includes an investment tax credit for stand-alone storage, promising to further boost deployments in the future. In its draft national electricity plan, released in September 2022, India has included ambitious targets for the development of battery energy storage.
