

Adding battery and solar to trailer

How do I hook up solar panels to my RV batteries?

Hooking up solar panels to your RV batteries is a straightforward process: Your solar panels sit outside your RV soaking up the sun's energy, wires carry that energy to the charge controller in your RV, and wires connect the charge controller to your RV batteries, charging them.

Can I install solar power on my RV or trailer?

When it comes to installing solar power on your RV or trailer, you have two options--you can bring your rig to the pros, or you can bite the bullet and DIY.

Do you need a solar panel for RV batteries?

Just remember that more gadgets mean more panels and bigger battery banks. I recommend having at least one 100-watt solar panel for charging RV batteries. It's the sweet spot for most weekend warriors. Powerful enough to keep your batteries topped up for all the essential 12-volt stuff, but not overkill.

How do you attach a solar panel bracket to an RV roof?

Roofing screws with rubber washers and butyl tape are being used to secure a solar panel bracket to an RV roof. Use the included self-drilling cap screws with rubber washers to secure the mounting brackets to the RV roof. They bite right into the roof material.

How do you connect a solar panel to a battery?

Some kits require that the charge controller be connected to the battery first, then the panel wire. Others recommend connecting to the solar panel first. Use a multimeter to test your wire polarity and mark each wire appropriately with tape or other indicator.

How do you install solar panels on a roof?

Mark the panel locations when you have them the way you want. If you are bolting the panel on the roof, install the mounting hardware included with your kit to the solar panel frame. Pro Tip: Avoid locations in which an air conditioner, vent, etc. might cast shade over the panels. Secure the panel to the roof.
