

# Analysis report on large domestic energy storage sites

Is DOE addressing the energy storage industry's challenges?

EAC conducted a months-long review of obstacles and challenges facing the energy storage industry to determine areas of pressure and pain, and to assess whether DOE was addressing these obstacles and challenges in its funding, policy, initiatives, and other efforts.

Do energy storage systems generate revenue?

Energy storage systems can generate revenue, or system value, through both discharging and charging of electricity; however, at this time our data do not distinguish between battery charging that generates system value or revenue and energy consumption that is simply part of the cost of operating the battery.

When will large-scale battery energy storage systems come online?

Most large-scale battery energy storage systems we expect to come online in the United States over the next three years are to be built at power plants that also produce electricity from solar photovoltaics, a change in trend from recent years.

Should DOE conduct a macro-energy storage analysis?

DOE should conduct a macro-energy storage analysis to determine the power and duration of energy storage needed and where it is needed. This should be compared with the projected availability to assess whether it satisfies the needs and evaluates the cost associated with the needs.

How does energy storage affect power grid performance?

Energy storage plays a pivotal role in enabling power grids to function with more flexibility and resilience. In this report, we provide data on trends in battery storage capacity installations in the United States through 2019, including information on installation size, type, location, applications, costs, and market and policy drivers.

What is the growth rate of industrial energy storage?

The majority of the growth is due to forklifts (8% CAGR). UPS and data centers show moderate growth (4% CAGR) and telecom backup battery demand shows the lowest growth level (2% CAGR) through 2030. Figure 8. Projected global industrial energy storage deployments by application
