

# Average BESS price per 10kWh in Brazil

What is driving Brazilian energy storage demand?

An unreliable grid is driving Brazilian energy storage demand. The world is set to have more than 760 GWh of energy storage capacity by 2030, led by Chinese and United States markets dominated by utility-scale systems.

How much does Bess cost?

The cost of BESS has fallen significantly over the past decade, with more precipitous drops in recent years: This is nearly a 70% reduction in three years, owing to falling battery pack prices (now as low as \$60-70/kWh in China), increased deployment, and improved efficiency.

Will Brazil install a battery energy storage system in 2024?

A study by Brazilian consultancy Greener has indicated that the country installed 269 MWh of energy storage capacity in 2024, growth of 29% from 2023. Demand for battery energy storage system (BESS) components grew 89% in Brazil from 2023 to 2024 and most of the resulting systems are likely to be installed in 2025.

What is the energy matrix in Brazil?

Historically, the Brazilian electricity matrix has been based on hydropower. However, over the last two decades, the mix of installed capacity has changed significantly through the introduction of different energy sources.

How does Bess work in Brazil?

In May 2024, the Brazilian Ministries of Development and of Science and Technology issued an ordinance to provide tax and non-tax incentives for the production of BESS in Brazil. The ordinance establishes the concept of a 'basic production process' and a points-based system for lead and lithium batteries.

Could pumped hydro be the missing piece in Brazil's energy system?

Conclusion Although energy storage solutions have yet to be widely deployed in Brazil, generation flexibility remains a scarce commodity. Therefore, storage projects, including pumped hydro, could be the missing piece needed to enhance the country's energy system.

The cost and performance of the battery systems are based on an assumption of approximately one cycle per day. Therefore, a 4-hour device has an expected capacity factor of 16.7% ( $4/24 = 0.167$ ), and a 2-hour device has an expected ...

Current costs for utility-scale battery energy storage systems (BESS) are based on a bottom-up cost model using the data and methodology for utility-scale BESS in (Feldman et al., 2021). The bottom-up BESS model accounts for major ...

As with utility-scale BESS, the cost of a residential BESS is a function of both the power capacity and the

## Average BESS price per 10kWh in Brazil

energy storage capacity of the system, and both must be considered when estimating system cost. Furthermore, the Distributed ...
