

Average BESS price per 250MW in Sweden

How is Sweden's Bess market evolving?

Sweden's BESS market is evolving rapidly, fueled by increasing renewable energy penetration, rising electricity demand, and changes in market structures. While challenges exist, diversification across multiple energy markets and leveraging advanced trading strategies will be critical for maximising BESS profitability.

How profitable is Bess in southern Sweden?

August 6th serves as a compelling example of BESS profitability in southern Sweden. Power prices fluctuated significantly throughout the day, offering multiple trading opportunities across different markets: Energy arbitrage in intraday and day-ahead markets: A 1MW battery could earn EUR250 in just four hours of trading.

How much does a Bess battery cost?

Factoring in these costs from the beginning ensures there are no unexpected expenses when the battery reaches the end of its useful life. To better understand BESS costs, it's useful to look at the cost per kilowatt-hour (kWh) stored. As of recent data, the average cost of a BESS is approximately \$400-\$600 per kWh. Here's a simple breakdown:

How much does Bess cost?

The cost of BESS has fallen significantly over the past decade, with more precipitous drops in recent years: This is nearly a 70% reduction in three years, owing to falling battery pack prices (now as low as \$60-70/kWh in China), increased deployment, and improved efficiency.

How much money can a Bess generate a year?

Estimates suggest a 1 MW/2MWh BESS can generate ~EUR100,000/MW/year in revenue, with higher earnings possible through intraday and balancing market participation. These levels position Sweden competitively against major European markets. Looking ahead, several factors will shape Sweden's BESS market:

Why should you invest in Bess batteries in Sweden?

BESS investments in Sweden thrive when operators adopt a comprehensive approach to leveraging market opportunities. Batteries excel in their versatility, offering operators the ability to trade across multiple markets, including intraday, day-ahead, FCR-D, FCR-N, FFR, aFFR and mFRR.

The sharp decline in FCR-D prices in Sweden since April has made simple (one-market) energy trading less profitable. This shift highlights the importance of adopting more advanced trading strategies to secure consistent returns and ...
