

Average BESS price per 800MW in Sweden

How is Sweden's Bess market evolving?

Sweden's BESS market is evolving rapidly, fueled by increasing renewable energy penetration, rising electricity demand, and changes in market structures. While challenges exist, diversification across multiple energy markets and leveraging advanced trading strategies will be critical for maximising BESS profitability.

How profitable is Bess in southern Sweden?

August 6th serves as a compelling example of BESS profitability in southern Sweden. Power prices fluctuated significantly throughout the day, offering multiple trading opportunities across different markets: Energy arbitrage in intraday and day-ahead markets: A 1MW battery could earn EUR250 in just four hours of trading.

How much does a Bess battery cost?

Factoring in these costs from the beginning ensures there are no unexpected expenses when the battery reaches the end of its useful life. To better understand BESS costs, it's useful to look at the cost per kilowatt-hour (kWh) stored. As of recent data, the average cost of a BESS is approximately \$400-\$600 per kWh. Here's a simple breakdown:

How much does Bess cost?

The cost of BESS has fallen significantly over the past decade, with more precipitous drops in recent years: This is nearly a 70% reduction in three years, owing to falling battery pack prices (now as low as \$60-70/kWh in China), increased deployment, and improved efficiency.

Does Sweden have a battery energy storage system?

Sweden has traditionally lagged behind continental Europe in Battery Energy Storage Systems (BESS) growth, but recent developments have propelled rapid expansion. Until 2022, only a few projects were launched, mainly supported by subsidies and specific storage needs.

Why is Bess important in Sweden?

Sweden's renewable energy sector continues to expand rapidly. In 2018, solar and wind energy accounted for just 13% of total electricity consumption, but this figure is projected to reach 40% by 2025. This shift significantly increases the value of energy flexibility, making BESS essential for balancing energy supply and demand.

The sharp decline in FCR-D prices in Sweden since April has made simple (one-market) energy trading less profitable. This shift highlights the importance of adopting more advanced trading strategies to secure consistent returns and ...

Current costs for utility-scale battery energy storage systems (BESS) are based on a bottom-up cost model

Average BESS price per 800MW in Sweden

using the data and methodology for utility-scale BESS in (Feldman et al., 2021). The bottom-up BESS model accounts for major ...
