

Average NMC battery storage price per 50MW in India

How much does battery-based energy storage cost in India?

Currently, the cost of battery-based energy storage in India is INR 10.18/kWh, as discovered in a SECI auction for 500 MW/1000 MWh BESS. The government has launched viability gap funding and Production-Linked Incentive (PLI) schemes to make battery storage affordable.

How much does a battery system cost in India?

Our bottom-up estimates of total capital cost for a 1-MW/4-MWh standalone battery system in India are \$203/kWh in 2020, \$134/kWh in 2025, and \$103/kWh in 2030 (all in 2018 real dollars). When co-located with PV, the storage capital cost would be lower: \$187/kWh in 2020, \$122/kWh in 2025, and \$92/kWh in 2030.

Are India-specific battery storage cost benchmarks useful?

An increasing number of battery storage projects are being built worldwide, and there is significant interest in storage among Indian utilities and policymakers. However, detailed India-specific cost benchmarks that could help utilities design solicitations and assess costs and benefits have been unavailable.

How much does PV energy cost in India?

When we scale unsubsidized U.S. PV-plus-storage PPA prices to India, accounting for India's higher financing costs, we estimate PPA prices of Rs. 3.0-3.5/kWh (4.3-5.162/kWh) for about 13% of PV energy stored in the battery and installation years 2021-2022.

How much would energy storage cost in India by 2030?

By 2030, the LCOS for standalone BESS system would be Rs 4.1/kWh and that for co-located system would be Rs 3.8/kWh. This implies that adding diurnal flexibility to ~20-25% of the RE generation would cost an additional Rs 0.7-0.8/kWh by 2030. What is the value of energy storage in India? How would it be dispatched? How much storage is required?

Are battery prices rising in India?

Indian battery prices are still slightly higher at USD 70-80/kWh. Battery costs constitute over 50 per cent of BESS capital expenditure. The report states that viability gap funding (VGF) of up to 40 per cent, capped at INR 2.7 million/MWh, continues to play a critical role in ensuring tariff sustainability.

Lithium-ion (Li-ion) EV battery prices have decreased dramatically over the past few years, mainly due to the fall in prices of critical battery metals: Lithium, cobalt and nickel. For example, the price of cobalt has fallen from roughly \$70,000 ...
