

# Average commercial energy storage price per 30MW in Finland

Which energy storage technologies are being commissioned in Finland?

Currently, utility-scale energy storage technologies that have been commissioned in Finland are limited to BESS (lithium-ion batteries) and TES, mainly TTES and Cavern Thermal Energy Storages (CTES) connected to DH systems.

Is energy storage a viable solution for the Finnish energy system?

This development forebodes a significant transition in the Finnish energy system, requiring new flexibility mechanisms to cope with this large share of generation from variable renewable energy sources. Energy storage is one solution that can provide this flexibility and is therefore expected to grow.

Is energy storage the future of wind power generation in Finland?

Wind power generation is estimated to grow substantially in the future in Finland. Energy storage may provide the flexibility needed in the energy transition. Reserve markets are currently driving the demand for energy storage systems. Legislative changes have improved prospects for some energy storages.

What is the electricity supply in Finland in 2022?

The electricity supply in Finland is quite diverse. As presented in Fig. 1, the Finnish electricity supply in 2022 consisted of nuclear power (29.7 %, 24.2 TWh), different types of thermal power plants (24 %, 19.6 TWh), imports (15.3 %, 12.5 TWh), hydropower (16.3 %, 13.3 TWh), wind power (14.2 %, 11.6 TWh), and solar power (0.5 %, 0.4 TWh).

What are some examples of GWh-scale borehole thermal energy storage in Finland?

Examples of larger GWh-scale borehole thermal energy storages built in Finland include one built at a logistics center in Sipoo and an underground parking lot in Turku. Normally, the depth of the boreholes for ground-source heating and in borehole thermal energy storages is a few hundred meters at most.

Should consumers invest in their own electricity storage capacity?

In Finland, traditionally, about two-thirds of the consumer electricity bill has consisted of taxes and transmission costs. Consumers who also have their own production (e.g., PV panels) could thus potentially, in the future, make savings when investing in their own behind-the-meter electricity storage capacity.

The 2021 ATB represents cost and performance for battery storage across a range of durations (1-8 hours). It represents lithium-ion batteries only at this time. There are a variety of other commercial and emerging energy storage ...
