

Average domestic energy storage price per 1GW in Norway

How much does electricity cost in Norway?

As Norway continuously upgrades and expands its energy infrastructure, the costs associated sometimes translate to temporary spikes in electricity prices. The average electricity price (including taxes but excluding grid rent) range between 0.50 to 1.00 Norwegian Krone (NOK) per kWh.

Why does Norway have a high electricity price?

With its interconnections with neighboring countries, global energy demand and supply shifts often reverberate in the Norwegian electricity market. As Norway continuously upgrades and expands its energy infrastructure, the costs associated sometimes translate to temporary spikes in electricity prices.

Can Norway export surplus electricity?

Thanks to interconnectors with neighboring countries, Norway can export surplus electricity during wet years and import during dry ones. This interplay often directly impacts electricity prices, making it essential to consider the broader European market when examining the Norwegian electricity landscape.

Does Norway offer electricity support?

The Norwegian government launched a temporary electricity support package for households from December 2021. From the 4th quarter of 2021 and onwards, data on average electricity support is included in the electricity price statistics.

Why does Norway have a deregulated electricity market?

This can be attributed to differences in local production, consumption patterns, and grid costs. Major cities like Oslo and Bergen may have different average prices compared to more remote areas. The freedom to pick and switch providers is one of the advantages of Norway's deregulated electricity market.

Why did Norway open its electricity market to competition?

Since the late 1990s, Norway has opened its electricity market to competition, meaning consumers can freely choose their provider. This deregulation is intended to encourage competition among providers, fostering innovation and better prices for consumers.
