

# Average energy storage calculation

How is energy storage capacity calculated?

The energy storage capacity,  $E$ , is calculated using the efficiency calculated above to represent energy losses in the BESS itself. This is an approximation since actual battery efficiency will depend on operating parameters such as charge/discharge rate (Amps) and temperature.

What are base year costs for utility-scale battery energy storage systems?

Base year costs for utility-scale battery energy storage systems (BESSs) are based on a bottom-up cost model using the data and methodology for utility-scale BESS in (Ramasamy et al., 2023). The bottom-up BESS model accounts for major components, including the LIB pack, the inverter, and the balance of system (BOS) needed for the installation.

How is the value of electricity storage assessed?

The value of electricity storage is assessed by comparing the cost of operating the power system with and without electricity storage. This framework also describes a method to identify projects where the value of integrating electricity storage exceeds the cost to the power system.

How do I see cost details for utility-scale storage?

Cost details for utility-scale storage (4-hour duration, 240-megawatt hour [MWh] usable) Capital costs by category. Hover over the bars or select items in the legend to see how cost components change for each scenario. Select the arrow to see costs in a table instead of a graph.

How do you calculate battery efficiency?

Efficiency is the sum of energy discharged from the battery divided by sum of energy charged into the battery (i.e., kWh in/kWh out). This must be summed over a time duration of many cycles so that initial and final states of charge become less important in the calculation of the value.

How much does storage cost?

The corresponding levelized cost of storage for this case would be \$1,613/MWh - \$3,034/MWh. The scope of revenue sources is limited to those captured by existing or soon-to-be commissioned projects. Revenue sources that are not identifiable or without publicly available data are not analyzed
