

# Average grid tied storage system price per 20MW in Iran

Is Siahbishe PSHP a good investment in Iran's power grid?

The Siahbishe PSHP, as the largest storage system in Iran, has been connected to Iran's power grid in recent years. The value of this plant in Iran power grid has not yet been determined and in this paper, this issue is investigated. Also, a proper mechanism for scheduling of this PSHP, especially to reduce total generation costs is required.

What is the economic value of PSHP in Iran?

In general, the economic value of the PSHP in Iran's national grid is in two items: Fuel-saving in thermal units due to peak shaving and valley filling; Providing ancillary services such as frequency control and voltage control; In this section, only the first item is estimated.

How much is Siahbishe PSHP worth in Iran?

The average daily equivalent fuel-saving is calculated with the equivalent fuel-saving of 55 days in the two-year period. As can be seen in Table 5, the approximate annual value of Siahbishe PSHP in Iran power grid based on the reduced fuel consumption in thermal units is 93,793,000 \$.

The battery storage technologies do not calculate levelized cost of energy (LCOE) or levelized cost of storage (LCOS) and so do not use financial assumptions. Therefore, all parameters are the same for the research and development ...
