

Average hybrid renewable storage price per 500kW in Finland

Are high Vres shares possible in the Finnish energy system?

In conclusion, these studies indicate that high VRES shares in the Finnish energy system are possible, but require measures such as energy storage and demand response for their successful integration. 3.

What is the growth rate of PV installations in Finland?

Nevertheless, there has still been significant growth in Finland for both industrial and household PV installations. In 2022, the installed capacity of mostly small-scale grid-connected PV installations increased to 395 MW from 288 MW in the previous year, yielding an annual growth rate of 37 %.

How many hydrogen projects are there in Finland?

In a list of green investments in Finland by the Confederation of Finnish Industries, there are 31 planned hydrogen projects listed. The projects would produce hydrogen mainly through electrolysis, with some of the projects further refining the hydrogen into ammonia, methane and methanol.

What is the hydropower reservoir size in Finland?

The hydropower reservoir size in Finland is about 5.5 TWh. However, one-third of the hydropower plants are run-of-river plants that cannot be used as regulating power for weather-dependent wind and solar power.

How much wind power will Finland have by 2035?

The range of wind power and electricity storage capacity estimated to be found in the Finnish electricity system by 2035 across the four different scenarios are listed in Table 2. The scenario with the highest amount of wind power had a combined onshore and offshore wind power capacity of 44 GW and a production of 141 TWh.

How do EU-funded hydrogen projects work in Finland?

There is a variety of EU-funded financial tools and incentives for hydrogen projects. The affordable low-carbon electricity grid, the high availability of new VRES, and the willingness to pay from local offtakers, are making Finland attractive for European renewable hydrogen projects.

Finland's energy storage market is experiencing significant growth, with several utility-scale BESS installations coming online in recent years. The total operational energy storage capacity is currently about 200 MWh, with an ...
