

# Average industrial energy storage price per 20kW in Spain

How much energy storage will Spain have in 2024 - 2043?

Aim to ensure the effective deployment of energy storage. Spanish storage capacity from the current 8.3 GW, to 20 GW in 2030 and 30 GW in 2050. The PNIEC scenario for the hourly pool price projection calculation for the 2024 - 2043 horizon has been carried out by the Advisor based on PNIEC objectives using the software xPryce#174;.

Will Spain achieve 20GW of storage by 2030?

In addition, Spain has developed a national storage roadmap that includes a target to achieve 20GW of storage by 2030. However, current levels of customer-sited storage adoption already exceed its 2030 targets.<sup>37</sup> To date, neither has been sufficiently attractive to mobilize investments at scale.

How much electricity does Spain use a year?

To contextualise the impact of the evolution of the interruptibility service in Spain, large ICs of electricity account for approximately 9% of national demand, reaching a total annual consumption of 21 TWh of electricity in 2019 ( AEGE, 2020 ).

How much does battery storage cost in Europe?

The landscape of utility-scale battery storage costs in Europe continues to evolve rapidly, driven by technological advancements and increasing demand for renewable energy integration. As we've explored, the current costs range from EUR250 to EUR400 per kWh, with a clear downward trajectory expected in the coming years.

Does Spain have a lack of electrical interconnection capacity?

In the case of Spain, this lack of electrical interconnection capacity with the rest of Europe has two main negative implications: it limits the potential to accommodate new renewable energy capacity and makes wholesale electricity market prices usually higher than in its Central European neighbours.

How much capacity does a pumping plant have in Spain?

Around 3.3 GW of installed capacity (pure pumping). Used on a large scale in Spain for many years. Considerable Spanish pipeline under development. Confidence in this technology by relevant entities of the sector. 870 MW of storage operative capacity. Plants with specific remuneration. 10-15 years of track record.

The map shows the price of electricity for industrial use per kWh. The data on the map are for 132 countries and were collected in 2024 Q4. The latest data and historical series are available for download. The prices are calculated using ...

The 2021 ATB represents cost and performance for battery storage across a range of durations (1-8 hours). It

## Average industrial energy storage price per 20kW in Spain

represents lithium-ion batteries only at this time. There are a variety of other commercial and emerging energy storage ...
