

Average mobile ESS unit price per 800MW in China

How much does a battery energy storage system cost in China?

The procurement exercise has attracted 67 battery energy storage companies but only six have emerged as winners. The average bid stood at CNY 0.473/Wh (\$65/kWh). Public procurements in China continue to demonstrate exceptionally low price levels for lithium-ion phosphate (LFP) battery energy storage systems (BESS).

How much does an ES8 cost in China?

The standard ES8 starts at RMB 448,000 (~\$68,000 USD) or RMB 375,400 (\$57,000) after govt. incentives, which represents roughly half of the price of the Tesla Model X in China.

How much does a MWh system cost?

MWh (Megawatt-hour) is a measure of energy capacity (how long the system can continue delivering that power output). For example, a 1 MW /4 MWh BESS has four hours of storage capacity. So, while the system might be \$200,000 per MW, the effective cost can be \$800,000 per MWh if it has four hours duration.

How can China achieve energy self-sufficiency?

The long-term solution for China to achieve energy self-sufficiency comprises renewables reaching grid parity and sufficient energy storage capacity. Over the past decade, China has been laying the groundwork, becoming a world leader in PV, onshore wind, and lithium battery industries.

Why is energy storage a problem in China?

Issues such as poor actual operating rates of renewable-storage integrated facilities continue to strangle the development of energy storage in China. Currently, China is still managing to refrain from fossil fuel imports, aiming to reach carbon peak and carbon neutrality by 2060.
