

Average photovoltaic ESS price per 15MW in Romania

What are the different solar energy schemes in Romania?

Some of the most notable schemes include: Feed-in-tariff (FIT) scheme: Under this scheme, renewable energy producers in Romania, including solar energy producers, are guaranteed a fixed price for their electricity for 15 years. The FIT rates for solar energy are revised every year, and they depend on the type and size of the solar project.

How much solar energy does Romania need?

In the context of the European ambitions, Romania would need to aim for 44.4% RES, meaning 11.1 GW of solar - 6.1 GW for utility-scale and 5 GW for rooftop PV. Drivers for solar growth The last two years have been marked by significant legislative changes that underpinned the development of the Romanian PV sector.

How many large-scale photovoltaic projects are there in Romania?

Here are some considerations based on this research. Romania has made significant strides in developing large-scale photovoltaic (PV) projects, contributing to its renewable energy goals. As of the latest data available, there are over 880 large-scale PV projects in Romania, boasting a cumulative capacity of approximately 46,600 MW.

How many solar rebates does Romania have in 2023?

Further to this, the government has assigned \$666 million for solar rebates in 2023 under a PV systems scheme. Overall, Romania has made significant strides towards the development of its solar energy sector, with a growing number of solar projects and investments flowing into the country.

How much solar power does Romania have in 2023?

As of 2023, Romania's power capacity is 18.4 GW with 8.4% coming from solar. The main factors behind the growing solar industry are the high irradiation, topography and land costs. Such is the excitement that the Romanian government has increased its photovoltaic energy target from the current status of 1,400 MW to 3,140 MW by 2030.

Where can solar energy be developed in Romania?

Arad (5.40 GW) and Dolj (5.39 GW) are the most promising locations, but counties such as Giurgiu (4), Bihor (3.8), Teleorman (2.6), Timis (2.3) and Dambovită (2.3) also stand out in this respect. This geographical diversity highlights the potential for solar energy development across Romania.
