

Average portable ESS system price per 2MW in Estonia

How much does a 2MW battery storage system cost?

In total, the cost of a 2MW battery storage system can range from approximately \$1 million to \$1.5 million or more, depending on the factors mentioned above. It is important to note that these are only rough estimates, and the actual cost can vary depending on the specific requirements and characteristics of each project.

How much does an EMS system cost?

It can account for about 2% to 5% of the total system cost. Assuming an EMS cost ratio of 3% for a 2MW system with a total system cost (excluding the EMS) of \$864,000 (the sum of the battery and BMS costs), the cost of the EMS would be $\$864,000 * 0.03 = \$25,920$.

How much does a MWh system cost?

MWh (Megawatt-hour) is a measure of energy capacity (how long the system can continue delivering that power output). For example, a 1 MW / 4 MWh BESS has four hours of storage capacity. So, while the system might be \$200,000 per MW, the effective cost can be \$800,000 per MWh if it has four hours duration.

How much does Bess cost?

The cost of BESS has fallen significantly over the past decade, with more precipitous drops in recent years: This is nearly a 70% reduction in three years, owing to falling battery pack prices (now as low as \$60-70/kWh in China), increased deployment, and improved efficiency.

Average portable ESS system price per 2MW in Estonia
