

# Average utility scale ESS price per 10kW in Kuwait

What are base year costs for utility-scale battery energy storage systems?

Base year costs for utility-scale battery energy storage systems (BESSs) are based on a bottom-up cost model using the data and methodology for utility-scale BESS in (Ramasamy et al., 2023). The bottom-up BESS model accounts for major components, including the LIB pack, the inverter, and the balance of system (BOS) needed for the installation.

How do you convert kWh costs to kW costs?

The \$/kWh costs we report can be converted to \$/kW costs simply by multiplying by the assumed 4-hour duration (e.g., a \$300/kWh, 4-hour battery would have a power capacity cost of \$1200/kW). To develop cost projections, storage costs were normalized to their 2024 value such that each projection started with a value of 1 in 2024.

Why are battery system costs expressed in \$/kWh?

By expressing battery system costs in \$/kWh, we are deviating from other power generation technologies such as combustion turbines or solar photovoltaic plants where capital costs are usually expressed as \$/kW. We use the units of \$/kWh because that is the most common way that battery system costs have been expressed in published material to date.

**Projected Utility-Scale BESS Costs:** Future cost projections for utility-scale BESS are based on a synthesis of cost projections for 4-hour duration systems as described by (Cole and Karmakar, 2023). The share of energy and power ...

Current costs for utility-scale battery energy storage systems (BESS) are based on a bottom-up cost model using the data and methodology for utility-scale BESS in (Feldman et al., 2021). The bottom-up BESS model accounts for major ...
