

Average warehouse solar storage price per 5MW in Norway

How much does power cost in Norway?

The mean annual Norwegian power price from the Monte Carlo simulations is estimated to be 39 ± 4 EUR/MWh and long-term price levels below 23 EUR/MWh or above 50 EUR/MWh seem highly unlikely in an average weather year.

Why is solar power growing in Norway?

Despite the low energy prices, solar power is growing rapidly in Norway. In 2016 four times as much capacity was installed as the year before, mostly on commercial buildings and private homes connected to the grid. Norwegian companies are also important players in the production of crude silicon and silicon wafers for the solar cell industry.

What can Norway do with solar energy?

In Norway, production of solar energy can offload the tapping of water reservoirs. Smart grids and digitization: Most Norwegian households will soon be equipped with smart meters. Smart grids make it easier to coordinate storage and consumption of energy.

Is solar power a viable option in Norway?

Norwegian hydropower is currently so cheap that power companies do not consider it attractive to build solar power plants in Norway. In recent years, however, companies have started selling or leasing solar systems to private customers and businesses in Norway. Despite the low energy prices, solar power is growing rapidly in Norway.

Is solar PV a good option for the future Norwegian power market?

Solar PV has an average market value as low as 20 ± 3 EUR/MWh. Despite low LCOE estimates, solar PV does not look like an attractive option for the future Norwegian power market, given our model assumptions.

What is the power price in Norway in 2040?

The 2040 power price in Norway is modelled to be 39 ± 4 EUR/MWh. Market value of Norwegian hydropower is 34% higher than the average power price. Seasonal patterns for solar PV give <3% probability of revenues higher than the LCOE. On/offshore wind has a 50%/1% probability of having revenues higher than the LCOE.

The solar price for residential installations depends on factors like system size, installation costs, location, and available incentives. While residential solar pricing is typically higher per megawatt-hour (MWh) than utility-scale projects, ...
