

# Average wind solar storage price per 800MW in Indonesia

Can wind and solar power be used in Indonesia?

On the other hand, wind and solar energy potential are enormous for energy generation in Indonesia. One of the barriers that hinder the use of both is their intermittent nature so that they are not economically profitable and can disrupt the existing power grid.

Why is wind energy important in Indonesia?

One form of renewable energy that has received special attention is wind energy. In the context of Indonesia, an archipelago with significant wind potential, the utilization of wind energy becomes strategic to achieve energy sustainability targets and to reduce the negative impacts of climate change.

Can energy storage be used together in Indonesia?

Several examples of the application of energy storage together applied in Indonesia. Canary Islands. The project aims to supply the entire island population with 100% renewable energy as previously they relied heavily on conventional diesel fuel. This project is a hybrid wind power system with pumped hydro energy storage.

Can wind energy be used as a land-use priority in Indonesia?

Investments and development attraction: The potential position of wind energy as one of the technologies crucial for Indonesia's energy transition, could be used as a motive to obtain land-use priority or land acquisition.

How many MW is a solar PV project in Indonesia?

PV Project (MEMR, 2021). than 30 years in Indonesia. This country's estimated wind power potential is around 9,286.61 MW, with wind speeds ranging from 2 - 6 m/s (Purwanto et al., 2006).

How many wind power plants are there in Indonesia?

The total capacity of economically viable wind power plant sites in Indonesia is estimated at 167,024 MW (167.0 GW) across 203 sites.
