What are battery storage power stations?

Battery storage power stations are usually composed of batteries, power conversion systems (inverters), control systems and monitoring equipment. There are a variety of battery types used, including lithium-ion, lead-acid, flow cell batteries, and others, depending on factors such as energy density, cycle life, and cost.

Why do battery storage power stations need a data collection system?

Battery storage power stations require complete functions to ensure efficient operation and management. First, they need strong data collection capabilities to collect important information such as voltage, current, temperature, SOC, etc.

What is a battery energy storage system design plan?

Detailed battery energy storage system design plans were developed based on site surveys, geological assessments and technical specifications. This includes producing construction blueprints, drafting drawings from various disciplines (structural, civil engineering, electrical, etc.), and signing technical agreements with equipment manufacturers.
