

Benefit analysis of pumped storage power station

Do pumped-storage power stations have a benefit evaluation model?

Based on the characteristics of pumped-storage power stations, this paper proposes a comprehensive benefit evaluation model for the functional, financial, and environmental benefits.

How to optimize pumped-storage power station operation?

Propose a novel optimization framework of pumped-storage power station operation. Optimize pumped-storage power station operation considering renewable energy inputs. GOA optimizes peak-shaving and valley-filling operation of pumped-storage power station. Promote synergies of hydropower output, power benefit, and CO₂ emission reduction.

What are the advantages of pumped storage?

As the most mature large-scale energy storage technology, pumped storage has the technical advantages of large rated power and a long continuous discharge time and is safe and environmentally friendly, which makes pumped-storage power stations the most widely used energy storage facilities today [5].

Is pumped storage plant a life cycle benefit evaluation model?

Based on the pumped storage electricity price mechanism and conforming to the construction law of China's spot power market, this paper established a life cycle benefit evaluation model of pumped storage plant through different market stages, and the evaluation results can provide decision-making reference for investors and national policy makers.

How can pumped-storage power (PSP) stations contribute to a low-carbon economy?

Facilitate the development of PSP station systems and a low-carbon economy. Optimizing peak-shaving and valley-filling (PS-VF) operation of a pumped-storage power (PSP) station has far-reaching influences on the synergies of hydropower output, power benefit, and carbon dioxide (CO₂) emission reduction.

What are the functional benefits of a hybrid pumped-storage power station?

The functional benefits refer to the benefits brought by a hybrid pumped-storage power station in the grid through energy storage and power generation, regulating the system's power and playing its own special function. The secondary indicators are as follows [17].
