

# Best battery and solar setup for 48v sailboat motor

Can a solar powered boat motor charge faster?

Editor's Note: Larger solar panels can support longer hours of charging with more energy inside but will not make the charging any faster. So if you don't want to take any risk of failure, the best solution is to get a whole solar powered boat motor system that includes the motor, battery, solar panel, and solar charger.

Can a solar powered boat motor be a solution?

Solar-powered boat motors could be a solution! The solar powered boat has indeed drawn a lot of attention these days not only because it saves the water environment from pollution but also reduces the cost of operation. However, is it feasible to use a solar powered boat motor as the main power source?

How to get a solar powered boat?

If you want to save your time and trouble, here is a shortcut for you: Just using a solar powered outboard motor and have it installed on the back. And usually, you can buy all the necessary accessories to successfully get a solar powered boat from the same brand, including the batteries, solar panels, charger, and wires.

Can solar power a sailboat?

The electric sailing league, that champions a world powered by nature, has been using ePropulsion's solar products to power the electric outboard motors used on eleven supporting boats at its Grand Prix events. Tips: If you are a sailboat owner and want a minimum impact on the environment, check out the Spirit 1.0 Evo.

How long does a solar powered boat motor take to charge?

That's to say, the solar powered boat motor can take over 20 hours to get fully charged in adverse weather conditions. If that's something that you are looking for, continue reading for the best solar powered boat motor setup.

How much solar power does a boat need?

For instance, a boat with two new, good quality, deep-cycle house batteries of 100Ah each would supply 100Ah of energy to consume between charges, if you only use the recommended 50% of available charge between each charge cycle to protect the batteries. Totalling around 100Ah. For this you'd need 400W of solar capacity.
