

# Best battery for camper solar

Should I buy a battery bank for my RV Solar System?

Your battery bank is a very important (and potentially expensive) component of your RV solar system, so you should do plenty of research on the best RV batteries before you buy.

What type of batteries are best for a campervan?

For a campervan, hybrid batteries are often a good choice. They won't last as long as a deep-cycle battery, but are usually cheaper and can be suitable for some electronic requirements. Golf cart batteries require a lot of power and may not be the best option for a campervan.

Which battery is best for a flooded RV?

AGM batteries are now the most popular lead-acid RV batteries. While AGM batteries are slightly more expensive than the other two, flooded batteries require consistent maintenance and gel batteries have low discharge/recharge rates. If you are going with lead-acid batteries, choose AGM.

Are lithium RV batteries durable?

This traditionally isn't a problem, but the best batteries are built with a sturdy housing that isn't going to break or crack when subject to the bouncing that comes along with driving an RV. The best way to analyze the durability of a lithium RV battery is to dive into the user reviews for each battery you're interested in.

Do you need solar power for dry camping?

Dry camping in your RV doesn't mean you have to lose the comforts of home; but if you need your morning espresso or want to watch the game in the evening, you will be relying on your RV batteries. Solar panels can power you through sunny days, but you need somewhere to store this solar power to use when the sun isn't out.

How long do RV batteries last?

As long as you use and store your batteries properly, lithium batteries can last 10+ years. Even if you don't over-discharge your lead-acid RV batteries, you will probably only get 2-3 years out of them. If you plan on using your batteries for 5+ years, lithium will be the cheaper option (despite the scary up-front cost).
