Does Botswana utilize solar energy?

Botswana has one of the highest levels of solar insolation in the world, but until recently, there were no reports of significant use of solar energy. However, as of September 2012, the first solar power generation plant in the country has been opened. The Botswana Renewable Energy Conference was held on 11-12 August 2014.

Can Botswana meet its energy needs in 2021?

According to the International Renewable Energy Agency (IRENA), Botswana could meet 15% of its energy needs in 2030 from its indigenous solar, wind, and bioenergy resources. (2021 evaluation)

What is Botswana's energy potential?

For Botswana, the following technical potentials were identified: Wind (high capacity factor) - 1 152 MW. The least-cost analysis estimated a potential of 199 MW from renewable energy, 139 MW of which in utility-scale projects and 60 MW of-grid. The firm reserve margin would reach 23% in 2030, with zero net imports.

Where is a 20 kW solar plant located in Botswana?

The University of Botswana installed a 20 kW experimental solar plant in Mokolodi village (Gaborone) with net metering and resell of excess power to the BPC grid.

What is the energy balance in Botswana?

Figures 6 and 7 present the energy balance in Botswana for 2018, describing the flows from production and imports (Figure 6) to total final energy consumption (Figure 7). Botswana's total primary energy supply (TPES) primarily comprises oil products (34.7%), coal (47.7%) as well as (traditional) biofuels and waste (19.1%), (Figure 6).

Does Botswana use bioenergy?

Source: Global Atlas (2021). Botswana is endowed with a range of bioenergy resources which could be used for energy production. Wood fuel remains the dominant cooking fuel for rural households, as 42% of the population relies on it (IEA, 2016). In 2009, a usage rate of 53% in rural and 13.1% in urban households was reported (SEforALL, 2012).
