

# Calculation method of peak load capacity of energy storage power station

Can a PV energy storage system supply all peak load requirements?

The PV energy storage system cannot(or just happens) to supply all peak load requirements. When it is in condition (2). The PV energy storage system is in a position to supply all peak load demands with a surplus in condition (3). These three relationships directly affect the action strategy of the ESS.

How to determine the operation timing of PV energy storage system?

In order to make the operation timing of ESS accurate,there are three types of the relationship between the capacity and loadof the PV energy storage system: Power of a photovoltaic system is higher than load power. But this time,the capacity of ESS is less than or equal to the total demand capacity of the load at peak time;

How is energy storage capacity calculated?

The energy storage capacity, $E$ ,is calculated using the efficiencycalculated above to represent energy losses in the BESS itself. This is an approximation since actual battery efficiency will depend on operating parameters such as charge/discharge rate (Amps) and temperature.

How to determine energy storage capacity in a grid-scale energy storage system?

In (Khalili et al.,2017),Proposed a capacity determination method for grid-scale energy storage systems (ESSs),using the exchange market algorithm(EMA) algorithm,the results show the ability of the EMA in finding the global optimum point of the storage and their hourly charging rate.

What is the maximum load of a power system?

The maximum load of the power system is 9896.42 MW. The conventional units of the system mainly consist of 18 units of three types,with a total installed capacity of 7120 MW.

What is the energy storage capacity of a photovoltaic system?

Specifically,the energy storage power is 11.18 kW,the energy storage capacity is 13.01 kWh,the installed photovoltaic power is 2789.3 kW,the annual photovoltaic power generation hours are 2552.3 h,and the daily electricity purchase cost of the PV-storage combined system is 11.77 \$. 3.3.2. Analysis of the influence of income type on economy
