

China's energy storage giant

How big is China's energy storage capacity?

State Grid Corp of China currently has a scale of 36.80 million kW or 77.56 million kilowatt-hours of new energy storage, with 95 percent of this capacity becoming operational over the past three years, underscoring the accelerated pace of energy storage deployment across China.

What is the future of energy storage in China?

Image: Getty Images/iStockphoto In China, generation-side and grid-side energy storage dominate, making up 97% of newly deployed energy storage capacity in 2023. 2023 was a breakthrough year for industrial and commercial energy storage in China. Projections show significant growth for the future.

How much will China invest in energy storage by 2027?

China, which already boasts the world's largest energy-storage capacity, is set to nearly double that level by 2027, with an anticipated investment of 250 billion yuan (US\$35 billion), according to Beijing's latest action plan.

Which energy storage systems dominate China?

In China, generation-side and grid-side energy storage dominate, making up 97% of newly deployed energy storage capacity in 2023. Image: Getty Images/iStockphoto In China, generation-side and grid-side energy storage dominate, making up 97% of newly deployed energy storage capacity in 2023.

Is China's energy storage sector growing?

According to the report, China's energy storage sector has maintained a rapid growth momentum from 2023, with new energy storage capacity expanding from 8.7 million kilowatts in 2022 to 31.39 million kW last year. On the other hand, new energy storage plants in China are increasingly shifting toward centralized, large-scale installations, it said.

Where does China's storage capacity come from?

The majority of China's storage capacity comes from large-scale storage projects, such as hydropower with reservoirs on the Yangtze River and gigawatt-level battery energy storage systems in Inner Mongolia.
