Why should China develop energy storage?

Experts said developing energy storage is an important step in China's transition from fossil fuels to a renewable energy mix, while mitigating the impact of new energy's randomness, volatility, intermittence on the grid and managing power supply and demand. "Developing power storage is important for China to achieve green goals."

Where are solar energy storage units located in China?

On a mountain pass in Jiawa village, Qusum county, Shannan, southwest China's Xizang autonomous region, rows of energy storage units hum quietly beside a solar-storage power station. "These facilities are designed to work with photovoltaic power generation."

How many kilowatts is China's energy storage capacity?

According to China's National Energy Administration (NEA), by the end of 2024, the total installed capacity of new energy storage projects in China reached 73.76 million kilowatts, representing an increase of over 130 percent compared to the end of 2023.

Why is power storage important for China?

"Developing power storage is important for China to achieve green goals. With increasing use of wind and solar power, the market prospect of power storage is very promising," said Liu Jing, associate dean and professor of accounting and finance at the Cheung Kong Graduate School of Business.

How big will China's power storage industry be by 2025?

Industry estimates show that China's power storage industry will have up to 100 million kilowatts of installed capacity by 2025, and 420 million kW installed capacity by 2060, attracting related investment of over 1.6 trillion yuan, said Li Jie, general manager of power storage at State Grid Integrated Energy Service Group Co Ltd.

Does China's new energy storage system guarantee supply security?

The trial effectively validated the system's capacity to guarantee supply security. By the end of July, within the service area of China's State Grid, the maximum dispatchable power from new-type energy storage reached 64.23 GW, with a real-time maximum discharge of 44.53 GW, up 55.7 percent from last year.
