

Composition of energy storage air conditioning system

What is a thermal energy storage air-conditioning system?

Building envelope composition and heat transfer coefficient. This thermal energy storage air-conditioning system is mainly composed of an air source heat pump(ASHP),an energy storage tank,a circulating water pump,an air handle unit (AHU),and a variable air volume box (VAV box),fan coils and control system.

How does a thermal storage air conditioning system work?

The thermal storage air conditioning system responds to peaks in cooling loads during the day by combining cold energy stored during the night with that produced during daytime. Consequently,the size of the installation capacity can be kept to almost half that of systems that do not utilize thermal storage.

What are the limitations of thermal energy storage systems for building cooling?

As stated above, traditional thermal energy storage systems for building cooling, such as ice, chilled water, and phase change material (i.e. organic, inorganic, and hydrated salts) are limited by low efficiency, slow response time (due to its low thermal conductivity) and necessity of large equipment sizing.

What is thermal energy storage (Lhtes) for air conditioning systems?

LHTES for air conditioning systems Thermal energy storage is considered as a proven method to achieve the energy efficiencyof most air conditioning (AC) systems.

How are thermal energy storage categorized?

The thermal energy storage can be categorized according to the type of thermal storage medium,whether they store primarily sensible or latent energy,or the way the storage medium is used . Cooling thermal storages are classified according to the thermal medium as shown in Fig. 1.

What is an Enn model for a thermal energy storage air-conditioning system?

An ENN model is developed for a thermal energy storage air-conditioning system. Both load forecasting and TES prediction is established. A demand response is implemented by field test based on the ENN model. Maximum energy reduction without comprising occupants comfort level is achieved.
