

# Cost of solar for 2000 kwh

How much does a solar system cost per watt?

As of publishing, the average cost per watt is \$2.84. Most solar companies set the price according to the solar system's wattage. A solar installation's "cost per watt" is a little like the "price per square foot" when you buy a house. It helps compare the value of solar energy systems in different sizes.

How much do solar panels cost?

The price of solar panels changes depending on where you live, but the average for installation is just under \$29,000 or \$2.75 per watt. On the high end, we talked to a solar customer in Hawaii who spent \$100,000 going solar. Dion in Nevada said their 10-kW system cost about \$20,000, which is about the national average price for a 7-kW system.

How much does a 5000 watt solar system cost?

A fully installed solar system typically costs \$3 to \$5 per watt before factoring in incentives like the 30% tax credit. Using this measurement, a 5,000 Watt solar system (5 kW) would have a gross cost between \$15,000 and \$25,000. The price per watt for larger and relatively straightforward projects are often within the \$3-\$4 range.

How much does it cost to clean solar panels?

Solar panels require very little upkeep. If you're able to clean the solar panels yourself, the only maintenance cost will be the water used to hose them down. If you hire a professional to clean your solar panels, it will cost around \$100 to \$350, on average.

How much does solar power cost in 2025?

Take control of your energy costs with solar power. Solar panels generate "free" electricity, but installing a system still costs money. A typical American household needs a 10-kilowatt (kW) system to adequately power their home, which costs \$28,241 in 2025.

How much do solar panels cost in 2024?

In 2024, the average cost to purchase and install solar panels for a 2,000-square-foot home ranges from \$18,000 to \$20,000 before applying tax credits and other incentives. When you break these figures down, that equates to \$2.75-\$3.35 per watt installed. However, your cost will vary based on all the factors listed above.

There are various factors from solar panel sizes, location, and so on that will come into play. We will help you calculate the exact number of solar panels you would need for 2,000 kWh per month. On top of that, you can freely use the " ...
