

Current status of foreign energy storage model research

What are the Research Frontiers in energy storage systems?

Our study reveals 19 research frontiers in ESTs distributed across four knowledge domains: electrochemical energy storage, electrical energy storage, chemical energy storage, and energy storage systems.

What are the different types of energy storage technologies?

The development of energy storage technology has been classified into electromechanical, mechanical, electromagnetic, thermodynamics, chemical, and hybrid methods. The current study identifies potential technologies, operational framework, comparison analysis, and practical characteristics.

Are energy storage technologies passed down in a single lineage?

Most technologies are not passed down in a single lineage. The development of energy storage technology (EST) has become an important guarantee for solving the volatility of renewable energy (RE) generation and promoting the transformation of the power system.

What are the four knowledge domains of energy storage technology research frontiers?

Among them, the research frontiers are distributed in the following four knowledge domains: electrochemical energy storage, electrical energy storage, chemical energy storage, and energy storage systems. Knowledge domain map of energy storage technology research frontiers.

Which countries have a literature search for energy storage technologies?

In this section, relevant literature on energy storage technologies was searched for China, the United States, Japan, and European economies. The specific numbers of collected literature are shown in Table A1. Table A1. Number of literature searches in the field of EST.

How many energy storage technologies are there?

In four domains, 19 energy storage technologies have been identified as energy storage research frontiers, including lithium batteries, supercapacitors, and new-generation batteries. Among them, the growing fronts and emerging fronts occur in the domain of electrochemical energy storage and chemical energy storage.
