

Data to monitor solar battery system

How do I monitor my rooftop solar or battery system?

Monitoring your rooftop solar or battery system can show you: your electricity use and the best time to use electricity. Most solar and battery systems include some type of monitoring on a display panel, website or app. Some monitoring systems provide more detail and are more useful for tracking the health of your system.

How to monitor a solar PV system?

All solar PV systems can be monitored using the Type-2 method; it's highly recommended to use this method. The polarity of the power readings depends on the orientation of the clip-on CT sensor. Orientate the CTs so that generation and site-consumption is positive and grid import/export is positive when importing and negative when exporting.

How can I monitor my solar system using Grafana?

Most of the projects here are based around using a Raspberry Pi Zero or Pi 4 hardware to read the serial output of compatible devices like charge controllers and display the information using Grafana. This allows you to monitor your solar system from any location using any device with a web browser, like your smartphone.

How do I know if my solar system is working?

Most solar and battery systems include some type of monitoring on a display panel, website or app. Some monitoring systems provide more detail and are more useful for tracking the health of your system. If your system has a string inverter with monitoring, you can see how much electricity is being generated by the total system.

What if my battery is participating in a virtual power plant?

If your battery is participating in a virtual power plant, you may be provided with an app that monitors its participation in different markets and the financial outcomes. Read more about virtual power plants. It's a good idea to check your monitoring system regularly to make sure your solar system or battery are operating as expected.

What can I do with my monitoring system?

If your monitoring system measures electricity usage as well as solar generation, you can use it to track: electricity exported to the grid. Some systems allow you to enter details of your electricity pricing plan and will provide you with accurate calculations of your financial savings. Learn more about electricity pricing plans.

Monitor your solar power system status from wherever you are and exactly how much solar energy your solar power system is producing. You can also monitor the electricity consumption of your home and battery storage status all in one ...
