

Detailed explanation of package-level energy storage fire extinguishing

Are lithium-ion battery energy storage systems fire safe?

With the advantages of high energy density, short response time and low economic cost, utility-scale lithium-ion battery energy storage systems are built and installed around the world. However, due to the thermal runaway characteristics of lithium-ion batteries, much more attention is attracted to the fire safety of battery energy storage systems.

Are large-scale fire extinguishing experiments necessary?

Therefore, before the fire extinguishing agent is used in energy storage stations, large-scale fire extinguishing experiments are necessary to truly evaluate the effectiveness and authenticity of the fire extinguishing agents and methods.

Can a lithium-ion battery energy storage system detect a fire?

Since December 2019, Siemens has been offering a VdS-certified fire detection concept for stationary lithium-ion battery energy storage systems.*Through Siemens research with multiple lithium-ion battery manufacturers, the FDA unit has proven to detect a pending battery fire event up to 5 times faster than competitive detection technologies.

How to protect battery energy storage stations from fire?

High-quality fire extinguishing agents and effective fire extinguishing strategies are the main means and necessary measures to suppress disasters in the design of battery energy storage stations. Traditional fire extinguishing methods include isolation, asphyxiation, cooling, and chemical suppression.

Are battery energy storage systems a fire hazard?

As the demand for renewable energy sources escalates, Battery Energy Storage Systems (BESS) have become pivotal in stabilizing the electrical grid and ensuring a continuous power supply. However, the high-density energy stored in these systems poses significant fire risks, necessitating cutting-edge fire suppression solutions.

What is battery energy storage fire prevention & mitigation?

In 2019, EPRI began the Battery Energy Storage Fire Prevention and Mitigation - Phase I research project, convened a group of experts, and conducted a series of energy storage site surveys and industry workshops to identify critical research and development (R&D) needs regarding battery safety.
