

Do solar garden lights need special batteries

Do solar lights need a battery charger?

Since the batteries used in solar lights are generally rechargeable batteries, you can use a battery charger that is designed to work with the same size battery (usually AA) to refill them. Using a charger is helpful if your lights have limited access to the sun or if they have been in storage.

Do solar lights use rechargeable batteries?

Since solar lights use rechargeable batteries and most standard-use batteries are designed to be rechargeable, there isn't a difference between the two. Since most rechargeable batteries are Nickel Cadmium (NiCd) or Nickel Metal Hydride (NiMH,) they can be used interchangeably in solar lighting.

Do solar lights need batteries?

Solar-powered lights need batteries in order to store the energy that they accumulate from the sun during the day. As soon as the sun goes down, the small solar array built into solar lighting stops producing energy so the bulb relies on the energy stored in the batteries to produce light.

What kind of battery do solar lights use?

While there are a lot of different battery types out there to pick and choose from powering solar lights today, the most popular options are definitely nickel-metal hydride and nickel-cadmium options. Both of these batteries have significant advantages over the older, out-of-date lead acid-style batteries that they replaced.

Which solar battery is best?

Nickel-metal hydride (NiMH) and nickel-cadmium (NiCd) are great options for solar batteries, but NiMH batteries edge out NiCd since they are more environmentally friendly. Lithium-Ion (Li-ion) batteries aren't always the best choice, mainly because they drain more quickly in hot temperatures.

How do I know if my solar lights need a new battery?

With regular alkaline batteries installed, go into a dark room and turn your solar lights on to test if the illumination is back to normal. If it is, then it's time you replace your rechargeable batteries with a new set. Be sure to uninstall the regular alkaline batteries from your solar lights to avoid any possible damage.
