

Does byd use solid state batteries

Will BYD use solid-state batteries in electric vehicles?

18. February 2025 Chinese automaker BYD has announced plans to deploy solid-state batteries in electric vehicles in a pilot phase starting in 2027. Primarily for cost and process stability reasons, the company will use sulfide-based electrolytes.

Will BYD use sulfide-based EV batteries in 2027?

In the initial phase, around 2027, BYD will use sulfide-based solid-state batteries that will mainly be used in higher-end vehicles. Sun said sulfide electrolytes can last longer, offer faster charging, and are more stable. A local report last November claimed China's CATL was also developing sulfide-based all-solid-state EV batteries.

Does BYD have an all-solid-state battery?

At the 2nd Annual China All-Solid-State Battery and Development Summit, Sun Huajun, the Chief Technology Officer (CTO) of BYD's battery division (Shenzhen BYD Lithium Battery Co.), provided an updated timeline on the company's progress with all-solid-state battery technology.

When will BYD launch EVs with all-solid-state batteries?

BYD expects its first EVs powered by all-solid-state batteries will arrive in 2027. Although the Chinese EV giant has already achieved several breakthroughs with the new battery tech, it could still be a few years before it reaches large-scale adoption. Here's when BYD expects that to happen.

Is BYD a good EV battery company?

BYD holds 17.2% of the market, making it a major player in the EV battery industry. Both BYD and CATL are actively developing all-solid-state batteries, but BYD's aggressive timeline for large-scale production sets it apart.

Is BYD a solid-state battery company?

BYD's foray into solid-state technology is not just about outpacing rivals--it's about redefining the entire battery paradigm. The company's commitment to safer, cleaner, and more efficient energy solutions reflects its broader goal of decarbonizing transportation and energy infrastructure.

Large-scale adoption of all-solid-state batteries may not happen until after 2030, BYD's battery business CTO said. After a certain level of scale of use, the cost of solid-state ternary batteries will theoretically reach a level ...

Chinese car and battery giant is reported to have tested the first generation of its solid-state battery in BYD vehicles in China, bringing with it a potential range of up to 1,500 km NEDC range. The reports were first seen in ...
