

What is a new energy cooperation framework for energy storage and prosumers?

A novel energy cooperation framework for energy storage and prosumers is proposed. A bi-level energy trading model considering the network constraints is presented. A profit-sharing mechanism is designed with the asymmetric Nash bargaining model. The adaptive alternating direction method of multipliers is applied efficiently.

How can a community energy storage system benefit prosumers?

An applicable way to solve the problem is to build multiple high-capacity community energy storage systems (CESSs) for shared use by prosumers. Both prosumers and CESSs can gain profits from energy sharing.

How to ensure the feasibility of cooperation between platform and prosumers?

To ensure the feasibility of cooperation, the energy sharing profiles and payment profiles between platform and prosumers/CESSs must be mutually agreed, that is: (15) (16) (17) (18) where are the Lagrange multipliers of equations (15), (16). The platform needs to meet the balance of energy sharing and payment as follows: (19) (20)

What is energy cooperation platform?

To achieve efficient sharing between CESSs and prosumers, the energy cooperation platform is introduced as a manager to ensure efficient cooperation operation. The feasibility and rationality of similar P2P platforms have been demonstrated in the reference.

Why is energy storage important?

Energy storage allows for the increased use of wind and solar power, which can not only increase access to power in developing countries, but also increase the resilience of energy systems, improve grid reliability, stability, and power quality, essential to promoting the productive uses of energy.

What is Energy Conservation & Energy Storage (ECES)?

Energy Conservation and Energy Storage (ECES) is one of 39 Technical Collaboration Programs within the International Energy Agency.
