

# Energy storage battery for tugboat

Can a tugboat run only on battery power?

Running only on battery power is ideal for inner harbour working tugs as they go short distances and can easily charge often. Fully electric powered tugboats produce zero emissions, require zero fuel, and operate noiselessly. This results in a reduction in fuel consumption and by 100% compared to diesel-powered tugs.

Are electric tugboats a good choice?

Fully electric powered tugboats produce zero emissions, require zero fuel, and operate noiselessly. This results in a reduction in fuel consumption and by 100% compared to diesel-powered tugs. Corvus Energy is the leading provider of safe and reliable marine battery energy storage systems.

Can a battery hybrid energy storage system optimize a marine battery system?

For some marine applications, battery systems based on the current monotype topologies are significantly oversized due to variable operational profiles and long lifespan requirements. This paper deals with the battery hybrid energy storage system (HESS) for an electric harbor tug to optimize the size of the battery system.

Do tugs have energy storage?

Tugs typically operate in or close to harbours. This makes it particularly vital for them to adapt greener technology. Using energy storage on board tugs makes lowering emissions possible. Corvus Energy supplies energy storage solutions to both fully electric, zero-emissions and hybrid tugboats.

Can a hybrid tugboat use a lithium ion battery?

BEES is a mature technology and there are already hybrid tugboats that have been deployed. However, Li-ion batteries have a very low energy density, and large battery installations will entail space and weight costs on the vessel. This is particularly difficult for tugboats, which are space constrained.

Who makes tugboat electrification systems?

Medha designs and manufactures turnkey electric thruster and pod propulsion unit, energy storage and power management systems for the electrification of Tugboats. The electrification solutions can be customised to each application and can vary from series or parallel hybrid solution to complete battery electric.
