

What is dynamic frequency modulation model?

The dynamic frequency modulation model of the whole regional power grid is composed of thermal power units, energy storage systems, nonlinear frequency difference signal decomposition, fire-storage cooperative fuzzy control power distribution, energy storage system output control and other components. Fig. 1.

Can battery energy storage improve frequency modulation of thermal power units?

Li Cuiping et al. used a battery energy storage system to assist in the frequency modulation of thermal power units, significantly improving the frequency modulation effect, smoothing the unit output power and reducing unit wear.

Do battery energy storage systems participate in primary frequency regulation coordination control?

Battery Energy Storage Systems (BESS) have become a hot research topic in participating in primary frequency regulation coordination control [3,4,5,6]. Numerous studies by domestic and international scholars have been conducted on the frequency regulation models and control strategies of BESSs participating in primary frequency regulation.

What is the frequency modulation of hybrid energy storage?

Under the four control strategies of A, B, C and D, the hybrid energy storage participating in the primary frequency modulation of the unit is 0.00194 p.u.Hz, excluding the energy storage system when the frequency modulation is 0.00316 p.u.Hz, compared to a decrease of 37.61 %.

How a thermal power unit coupling energy storage system works?

In this strategy, part of the power commands are assigned to the energy storage system through fuzzy control, so as to establish the primary frequency modulation scheduling module of the thermal power unit coupling energy storage system, which can ensure the power generation revenue of thermal power units.

Does energy storage participate in primary frequency regulation?

Reference proposed a simplified model for energy storage participation in primary frequency regulation, validating its effectiveness in enhancing system frequency regulation capability.
