How have international frameworks shaped energy storage technologies?

The evolution of international frameworks for energy storage technologies has been significant throughout recent decades. The UN, IEA, and IRENA have each played pivotal roles in shaping global energy policies.

What is the future of energy storage governance?

In the near future, the governance of energy storage demands progressive evolution. This includes developing comprehensive regulatory frameworks that support deployment, ensure safety, and spur innovation. Policymakers must also consider the economic and social impacts of these technologies to foster inclusive and sustainable energy policies.

Does the new EU legal framework affect the value of energy storage?

Analysis of impact of the new EU legal framework on the value of energy storage. Interdisciplinary methodology using legal analysis, expert interviews and modelling. Study of various storage technologies and applications across 12 EU countries. New legal regime fits for behind-the-meter batteries, which can become widespread.

What is the implementation plan for the development of new energy storage?

In January 2022, the National Development and Reform Commission and the National Energy Administration jointly issued the Implementation Plan for the Development of New Energy Storage during the 14th Five-Year Plan Period, emphasizing the fundamental role of new energy storage technologies in a new power system.

What is the future of energy storage?

Promising areas include advanced battery systems, hydrogen storage, and electricity-to-gas technologies. Further investigation into the integration of energy storage with renewable energy sources like wind and solar power is crucial for optimising efficiency and reliability.

What are energy storage systems?

Energy storage systems (ESS) play a crucial role in the transition to a low-carbon energy future. They enable the integration of renewable energy sources, such as solar and wind power, into the electricity grid by storing surplus energy generated during periods of high production and releasing it during periods of high demand.
