

Energy storage industry slows down growth response

Will energy storage growth continue through 2025?

With developers continuing to add new capacity, including 9.2 GW of new lithium-ion battery storage capacity in 2024 through November 2024 and comparable levels of growth expected through the fourth quarter of 2024, energy storage investments and M&A activity are expected to continue this trajectory through 2025.

What is the future of energy storage?

Renewable penetration and state policies supporting energy storage growth Grid-scale storage continues to dominate the US market, with ERCOT and CAISO making up nearly half of all grid-scale installations over the next five years.

Will energy storage grow in 2024?

The energy storage sector maintained its upward trajectory in 2024, with estimates indicating that global energy storage installations rose by more than 75%, measured by megawatt-hours (MWh), year-over-year in 2024 and are expected to go beyond the terawatt-hour mark before 2030.

Are energy storage installations going up 61% this year?

BloombergNEF team of analysts who follow the space are expecting this to continue, with energy storage installations rising 61% this year. Prices for turnkey energy storage systems are down 43% from a year ago, and that's leading to a big increase in deployments.

Why are annual storage installations growing faster than wind and solar?

Annual storage installations are growing faster than wind and solar as the sector races to keep up with the growing need to balance renewables and support grid resiliency. The storage market is also supported by falling module costs and IRA tax incentives.

How is the storage market changing?

As the storage market grows, procurement strategies are evolving to manage supply chain risks, cost volatility, safety issues, and regulatory shifts. Utilities and developers are structuring agreements to balance financial risk and feasibility.
