

Energy storage pack material list

What materials can SABIC provide for electric vehicle battery packs?

Depending on material and design requirements, SABIC's Specialties business can provide a number of materials for electric vehicle battery packs, including bus bar holders, covers, brackets, end plate assemblies and enclosures for battery management systems, control units, fuses and relays, etc.

Why is a high voltage battery pack enclosure important?

High voltage (>60 V) electric vehicle battery pack enclosures can contribute significant weight to the overall battery pack, impacting its specific energy (Wh/kg). Certain high performance engineering thermoplastic materials can replace traditional metals, saving weight and easing the burden of cumbersome processing.

What is a Megapack energy storage system?

Megapacks are designed for large-scale energy storage. Megapacks are used by utilities to replace or augment peaker power plants, which generate energy during periods of peak demand. Megapacks store grid energy rather than generating it from fuel.

How much energy can a Megapack store?

Each unit can store over 3.9 MWh of energy--that's enough energy to power an average of 3,600 homes for one hour. Each Megapack unit ships fully assembled and ready to operate, allowing for quick installation timelines and reduced complexity.

Which resin grades are suitable for a lightweight module enclosure?

For example, select NORYL(TM) resin grades such as NORYL(TM) N1150 resin, with its high ductility, UL94 V0 flame retardancy (to 1.5 mm) and resistance to Li-ion electrolyte* are already enabling lightweight module enclosures for our customers.
