

Energy storage work in industrial parks

Are energy storage systems in industrial parks interoperable?

To address the challenge that existing energy storage systems in industrial parks are not interoperable, leading to difficulties in coordinating energy operations during peak load periods across different energy sources, this paper proposes a DES incorporating the Carnot battery.

Do industrial parks need energy storage?

Existing industrial parks have a high demand for various forms of energy storage but lack the capability to provide comprehensive grid support. There is also an urgent need for DES to actively support the grid as a whole.

Can shared energy storage be used in industrial parks?

2. Literature review With the emergence of ESS sharing, shared energy storage (SES) in industrial parks has become the subject of much research. Sæther et al. developed a trading model with peer-to-peer (P2P) trading and SES coexisting for buildings with different consumption characteristics in industrial areas.

Why is shared energy infrastructure important in industrial parks?

Shareable energy infrastructure is universally used in industrial parks and generally has a long service lifetime^{27,28,29}; thus, the GHG emissions from industrial parks are locked in. Efficient, resilient, and sustainable infrastructure is a crucial pathway to greening industrialization³⁰.

What is energy infrastructure in an industrial park?

The energy infrastructure in an industrial park is defined as shareable utilities that are located within the park and provide energy for the park, e.g., heat and electricity³¹. Climate change mitigation requires decoupling energy services and GHG emissions.

Why is energy storage system installation important?

Although energy storage system (ESS) installation is an effective means of addressing the uncertainty problem of RESs and load demand, guaranteeing the stable and efficient operation of the industrial park's power system, cost inefficiency remains the main factor restricting ESS development.
