

Expected ROI of VRFB energy storage project in Malaysia 2030

How stable is the grid system for VRE penetration in Malaysia?

Fig. 2. Grid system stability for vRE penetration in Malaysia . Malaysia will be focusing on its power generation plan by exploring more renewable energy options. To date, the installed capacity for renewable energy in Malaysia is 7995 MW and it is projected to increase by more than twofold (18,000 MW) by 2035.

Why should Malaysia invest in rooftop solar?

This will attract more consumers to install rooftop solar packages, where they can store energy during low-load periods and sell energy during peak periods. This will help Malaysia to implement more renewable energy systems, thus reducing the dependency on coal in the next 20 years.

How much is a VRFB project worth?

Revenues from VRFB project deployments are expected to be worth about US\$850 million this year and projected to rise to US\$7.76 billion by 2031. That means annual global deployments of an estimated 32.8GWh per year by that later year and a compound annual growth rate of 41% in the market over this decade.

Is the vanadium redox flow battery (VRFB) industry poised for growth?

Cell stacks at a large-scale VRFB demonstration plant in Hubei, China. Image: VRB Energy. The vanadium redox flow battery (VRFB) industry is poised for significant growth in the coming years, equal to nearly 33GWh a year of deployments by 2030, according to new forecasting.

Are VRFBs a viable alternative to existing chemistries?

The research and market intelligence firm found that while lithium-ion dominates global energy storage deployments today by market share, various attributes of VRFBs make them a promising option in tandem with existing chemistries.

Why should you invest in BESS in Malaysia?

BESS offers not only environmental benefits but also lucrative investment opportunities. As Malaysia works towards reducing its carbon footprint and meeting green energy targets, BESS provides a reliable, efficient solution to store and distribute green energy from intermittent renewable sources such as solar, biomass, biogas, and hydropower.
