

Expected ROI of hybrid solar inverter project in Greenland 2030

Are renewables a good investment in Greenland?

The only two other identified studies on some communities in Greenland have both concluded that integration of renewables offers significant cost savings[47,51]. Furthermore, lower capex assumptions for solar PV in this study compared to Ref. suggest that even higher benefits may be achieved in a fully renewable system in the future. 5.2.

How much energy is needed in Greenland in 2050?

In 2050, curtailment of about 4% of the total electricity generation is required, a value known if three renewable resources complement each other in a sector coupled energy system. In the reference system, a major share of heating in Greenland is supplied by district heating, which is dominant in larger towns.

Will renewables be tripled by 2030?

At the COP28 UN Climate Change Conference in December, governments agreed to work together to triple the world's installed renewable energy capacity by 2030. Renewables 2024 offers a comprehensive country-level analysis on tracking progress towards the global tripling target based on current policies and market developments.

Will improvements in foundation design reduce electricity costs in Greenland?

However, in the future, if improvements in foundation design can be made, the improvements may significantly increase the FLH and thus may offer lower electricity costs. FLH of wind power on all area of Greenland is 5665 h, or 26% higher than on ice-free only area.

Why is Greenland so vulnerable to oil prices?

Greenland's energy system is very vulnerable to oil prices, as it relies on imported oil. Rich wind resources complementary with solar resources may enable a transition to a sustainable and self-sufficient energy system.

What is the primary energy mix of Greenland?

As presented in Fig. 2, the primary energy mix of Greenland changes notably between 2019 and 2050. In the reference scenario, oil constitutes around 80% of the primary energy consumption, with the rest being supplied mainly by hydropower.
