

# Expected ROI of mobile ESS unit project in Norway 2030

What is Rystad Energy's forecast for Global Bess installations?

Rystad Energy's forecast for global BESS installations over the coming decade. Image: Rystad Energy. Annual battery energy storage system (BESS) installations will grow by 10x between 2022 and 2030, according to research firm Rystad Energy.

What percentage of European battery energy storage systems are lithium ion?

By battery type, lithium-ion commanded 92% of the European battery energy storage system market share in 2024; flow batteries are projected to expand at a 16.66% CAGR through 2030.

What factors influence the ROI of a battery energy storage system?

Several key factors influence the ROI of a BESS. In order to assess the ROI of a battery energy storage system, we need to understand that there are two types of factors to keep in mind: internal factors that we can influence within the organization/business, and external factors that are beyond our control.

What factors affect the ROI of a Bess?

External Factors that influence the ROI of a BESS The cost of electricity, including peak and off-peak rates, significantly impacts the ROI. Energy storage systems can store cheaper off-peak energy for use during expensive peak periods.

What will Rystad expect from Bess deployments in 2022?

Rystad expects annual BESS deployments to grow by an average CAGR of 33% between 2022 and 2030, across all market segments including residential, commercial and grid-scale. From 43GWh of deployments last year, the firm is anticipating some 421GWh of new capacity to come online in 2030.

How does energy storage affect Roi?

The cost of electricity, including peak and off-peak rates, significantly impacts the ROI. Energy storage systems can store cheaper off-peak energy for use during expensive peak periods. Subsidies, tax credits, and rebates offered by governments can enhance the financial attractiveness of ESS installations.
