

Are flywheel energy storage systems a good choice?

Li-ion and lead-acid batteries are the most commonly used energy storage systems here. However, advantages of flywheel energy storage systems such as higher efficiency and longer life are projected to increase the demand for flywheel energy storage systems, within the country.

How does Flywheel energy storage work?

Flywheel energy storage (FES) works by accelerating a rotor (flywheel) to a very high speed and maintaining the energy in the system as rotational energy.

What are flywheels used for?

Flywheels are used as intermediate energy storage systems for transport applications such as automobiles. Flywheel storage energy systems are more commonly used in Formula 1 cars and hybrid vehicles. However, manufacturers such as Maruti Suzuki have adopted this technology for passenger vehicles also.

Are flywheel energy storage systems a good alternative to electro-chemical batteries?

Electro-chemical ESSs can be used in short-duration services, but they suffer from a short lifetime and the need to dispose of toxic materials. Flywheel energy storage systems (FESSs) are a promising alternative to electro-chemical batteries for short-duration support to the grid.

How much does a steel rotor flywheel cost?

The steel rotor flywheel has a lower capital cost and levelized cost of storage. The costs of composite and steel rotor flywheels are \$190 and \$146/MWh, respectively. Flywheel energy storage systems are increasingly being considered as a promising alternative to electro-chemical batteries for short-duration utility applications.

What is the largest flywheel energy storage?

The largest flywheel energy storage is in New York, USA by Beacon Power with a power rating of 20 MW and 15 min discharge duration. Utility-scale flywheel storage is typically used for frequency regulation to maintain grid frequency by matching electricity supply and demand for a short period, usually 15 min.
