

Free solar battery

Can a tenant get a solar & battery system for free?

If a tenant meets the income requirement, the property owner gets the solar +battery system installed for free . No credit checks, no out-of-pocket costs, no catch. It's one of the most accessible clean energy programs California has ever offered. How do I qualify? Qualification is primarily based on household income.

What is a solar battery & how does it work?

A battery will use stored grid or solar energy to keep your home running when grid power is disconnected. Qualifying customers may have most installation costs covered, allowing your home to be prepared for the unexpected without significant out-of-pocket costs.

When can I use my solar battery to power my home?

Discharging: You can use the energy stored by your battery to power your home or business when the price of electricity from the grid is more expensive, at night when your solar system isn't producing (if you have solar), or during an outage when you need backup power.

Do I NEED Solar to qualify for energy storage?

No, you do not need to have solar to qualify for this program. Energy storage allows for self-supply during outages for added resiliency. If your main electrical panel is configured to only have critical load (e.g., a few lights, refrigerator, A/C) on, your energy storage system will last longer.

Are there state-level incentives for solar energy storage?

To date, state-level performance incentives for storage have typically been added to solar incentives. Perhaps the best-known state-level storage incentive in the US is California's Self-Generation Incentive Program (SGIP). SGIP provides a dollar per kilowatt (\$/kW) rebate for the energy storage installed.

What is the best incentive for solar storage?

The best incentive for storage is the federal investment tax credit (ITC). The exact same ITC that provides a 30 percent credit on the cost of your solar system provides that same benefit to storage systems under certain conditions.
