

What is the business model for a German energy storage system?

Therefore the business model for a German energy storage system is slightly different to business models in other markets. The key business models in Germany comprise: Improvement of reliability of electricity supply for industrial production.

What are the business models for large energy storage systems?

The business models for large energy storage systems like PHS and CAES are changing. Their role is traditionally to support the energy system, where large amounts of baseload capacity cannot deliver enough flexibility to respond to changes in demand during the day.

Which energy storage system is most popular in Germany?

Residential ESS continues to lead in Germany's energy storage landscape. Residential energy storage systems (ESS) maintained their stronghold as the most prevalent installation type in Europe throughout 2023. According to TrendForce data, Germany's energy storage sector predominantly saw the adoption of residential storage solutions.

Why do we need energy storage systems in Germany?

Increasing the share of renewables poses new challenges: Excess energy produced during off-peak hours needs to be stored and made available when needed. Since energy storage systems (ESS) can balance supply and demand, they are an essential part of Germany's energy transition. In line with this, the market for ESS is constantly growing.

Are energy storage business models fully developed?

Even though the business models are not yet fully developed, the cases indicate some initial trends for energy storage technology. Energy storage is becoming an independent asset class in the energy system; it is neither part of transmission and distribution, nor generation. We see four key lessons emerging from the cases.

How many home storage units are there in Germany?

In 2020, more than 100,000 home storage units were implemented across Germany, bringing the total number to 300,000. In 2018, photovoltaic (PV) and energy-storage for households reached grid-parity: storing PV energy with batteries became cheaper than the price from the public power network.
