

Getting started as an energy storage product manager

How do I assign a system number to a powermanager project?

Use the following command: This command assigns the system name "System2" and the system number "2" to the powermanager project on the current server. With the project stopped, enter the command in the command line. If a distributed system is to run as a single system (single-user system) again, you must set the system number back to "1".

How do I log into Sentron powermanager?

Go to the base panel of the SENTRON powermanager. Launch reporting. You will find more information in the section entitled "Starting and terminating (Page 101)". Enter your password. The default password is "erAdmin". Confirm with "OK". Acknowledge all the subsequent dialog boxes with "Yes".

How to set a security level for SPM report generator?

For interruption-free operation of the SPM report generator, it is necessary to set the security level to "low". Open Microsoft Excel. On the "Security Level" tab, select the option "Low". Confirm the selection with "OK". Additional system files are required to operate Microsoft Excel under Microsoft Windows XP.
