Which parameters affect the electricity price in Norway in 2040?

The results from the Morris sampling procedure show that the three parameters with the largest impact on the electricity price in Norway in 2040 are the natural gas price (66), the carbon price (29), and onshore wind investment costs (31). Fig. 4. The standard deviation and the absolute value of the mean of the elementary effects plotted together.

What is the power price in Norway in 2040?

The 2040 power price in Norway is modelled to be 39 ± 4 EUR/MWh. Market value of Norwegian hydropower is 34% higher than the average power price. Seasonal patterns for solar PV give <3% probability of revenues higher than the LCOE. On/offshore wind has a 50%/1% probability of having revenues higher than the LCOE.

Will fossil fuel costs affect electricity prices in Norway in 2040?

Electricity prices remain strongly affected by fossil fuel costs to 2040. The 2040 power price in Norway is modelled to be 39 ± 4 EUR/MWh. Market value of Norwegian hydropower is 34% higher than the average power price. Seasonal patterns for solar PV give <3% probability of revenues higher than the LCOE.

How much electricity does Norway produce in 2021?

In 2021, Norway had an electricity production of 157 TWh, of which 91% was from hydropower, 8% from onshore wind, and <1% from thermal sources (NVE, 2021b). This shows that the Norwegian generation mix is already dominated by renewable energy. In normal weather years, Norway exports around 19 TWh of electricity to neighbouring countries.

How much does power cost in Norway?

The mean annual Norwegian power price from the Monte Carlo simulations is estimated to be 39 ± 4 EUR/MWh and long-term price levels below 23 EUR/MWh or above 50 EUR/MWh seem highly unlikely in an average weather year.

How much will Norwegian hydropower cost in 2040?

Monte Carlo simulations suggest an average Norwegian power price of 39 ± 4 EUR/MWh in 2040, and unlikely to slip below 23 EUR/MWh or exceed 50 EUR/MWh in normal weather years. Our results show that regulated hydropower will have a substantially higher market value than the average power price (value factor of 1.3-1.4).

This article provides an analysis of energy storage cost and key factors to consider. It discusses the importance of energy storage costs in the context of renewable energy systems and explores different types of energy
