

Will high electricity prices limit consumption growth in Norway?

However, growth assumes that electricity prices are low enough. Without new Norwegian electricity production, excluding the projects that are currently under development, high electricity prices will practically limit consumption growth to an estimated 25-30 TWh.

How does the development of electricity in Norway affect the economy?

The development of electricity prices and power flow in Norway is influenced by both consumption and production in Norway, and by how the market and system develop in the Nordic region and Europe. In addition, the development in Europe has a significant impact on technology costs and the development of Norwegian industry and business activities.

What will happen if the Norwegian energy balance goes down?

A lasting larger deficit in the Norwegian energy balance is unlikely as this will lead to high electricity prices and thus less new industry. Similarly, a larger surplus will quickly be offset by more consumption. At the same time, it is likely that new industry can outcompete existing ones - if there is not enough new production.

What happened to electricity prices in the second quarter of 2025?

Despite a decline in the spot price of electricity, the average electricity price for households was 3 percent higher in the second quarter of 2025 than in the previous quarter, but 1,1 percent lower than in the second quarter of last year. The statistics about production, import and export and consumption of electricity.

How will European electricity prices change in 2050?

European electricity prices continue to vary greatly hour by hour, possibly until 2050. Consumption in Norway may increase a lot - industrial competition and not as much production may dampen growth. Prices in Norway are gradually becoming more similar on average - internally and with neighboring countries.

What are the taxes for households in Norway?

Taxes for households consists of tax on consumption of electricity, value added tax (VAT) and subsidies to Enova. All counties in Norway have the same tax rate for the consumption of electricity, apart from some parts of Troms and the whole of Finnmark, which are exempt.

The battery storage technologies do not calculate levelized cost of energy (LCOE) or levelized cost of storage (LCOS) and so do not use financial assumptions. Therefore, all parameters are the same for the research and development ...
